## Enlightening Minds

**"Always be a first-rate version of yourself, instead of a second-rate version of somebody else." - Judy Garland**

Ever wondered or remember when someone told you that "I didn't want to do it but someone forced me to do it". Everyone might have come across statements like this or you yourself might have told it to someone. We live a life which we have to but not the life that we want to. We kill our passion and goals for others when choosing the area of study which we never wanted to do and joined a college half-mindedly. After a while, most of us don't stick to it because our friends don't want to do it and they don't want us to do it. Now this is the time we lose rest of the interest and start losing our true personality. We need to remember one thing at this juncture that the most daring thing is to be yourself and to do exactly what you want to do at that point in time and not to be worried with what other people are doing or what's popular at that point of time. When we are able to fight for a bike, mobile phone, laptop and pocket money from our parents, we should also fight for our passion and interested area of study (if only you are determined to do) before it is too late.

**"Always be yourself, express yourself, have faith in yourself, do not go out and look for a successful personality and duplicate it" - Bruce Lee**

We, especially the student community are exposed to lots of technology and the so called social networking sites that make people unsocial. People who are internally motivated use them, benefit out of them and grow but for people who are not internally motivated these technologies and social networking sites become distractions and later become a burden. Technology these days is like a garland in a monkey's hand and fire in a child's hand but to be on the positive side it's a gift.

**"It takes courage to grow up and become who you really are." - E.E. Cummings.**

Take responsibility for your own life and don't worry too much about making mistakes. Know your strengths and trust your intuition and instincts. Express yourself by cultivating your own style, tastes and personality and believe in yourself. Don't worry about what others think. I wish you all the best and success in your efforts.

## April

April is the fourth month of the year in the Gregorian calendar, the fifth in the early Julian and one of four months with a length of 30 days. April is commonly associated with the season of spring in parts of the Northern Hemisphere and autumn in parts of the Southern Hemisphere, where it is the seasonal equivalent to October in the Northern Hemisphere and vice versa.

## Arutchelvar Vidhya Sakthi

Scholarship Award Function

Arutchelvar Dr. N. Mahalingam's 93<sup>rd</sup> birthday was celebrated on 28-03-2016 in MCET campus. Arutchelvar Vidhya Sakthi Award was introduced and given to the beneficiaries and a book named **"Maanavargalukku Arutchelvar"** (Arutchelvar for students) compiled by Marabin Mainthan Mr. Muthayya was also released. Mr. lakoka Subramaniam was the chief guest for the occasion and Marabin Mainthan Mr. Muthayya was the guest of honour.

Secretary, NIA Educational Institutions, introduced the guests and welcomed the gathering by insisting on the importance of education and how Arutchelvar played a big role in transforming the lives around this region with his tireless efforts in bringing quality education.

Chairman in his presidential address, briefed on the importance of first generation graduates and the opportunities available for them from educational institutions and the governments. He compared the youngsters of Tamilnadu with the North Indian youngsters and said that people in South India have all the opportunities such as education, employment and to be specific the much needed parental support.

He insisted on the importance of youngsters becoming entrepreneurs. He cited that 20% of the officers in U.S. companies are from India and praised Mr. Shiv Nadar for his contributions to Indian IT industry. He echoed the vision of our prime minister's start up dream and urged the students to become efficient entrepreneurs.

Mr.lakoka Subramaniam in his presidential address, mesmerized the gathering with his jaw dropping speech. He listed the versatility of Arutchelvar in different dimensions, the greatness of Tamil literature, life style and the spirituality of Indians. He also emphasized on how Indians revere their parents with the example of Mr. Thiru Narayanan, who left everything in the U.S, just to look after his parents in India. He presented the opportunities available for Indian students in detail. He insisted on the importance of mother tongue based education but didn't fail to insist the gathering that learning other languages are always an added advantage. He requested the students to think beyond the box and go beyond the limits. He cited Arutchelvar as the example by reiterating on how he broke the limits and became a legend.

Marabin Mainthan Mr. Muthayya recalled his interactions with Arutchelvar and expressed his joy and satisfaction in compiling the book titled, "Maanavargalukku Arutchelvar" (Arutchelvar for students). He was in a state of ecstasy whenever he uttered the word Arutchelvar, reminding the audience that pronouncing Arutchelvar's name itself could generate huge positive energy force within oneself.

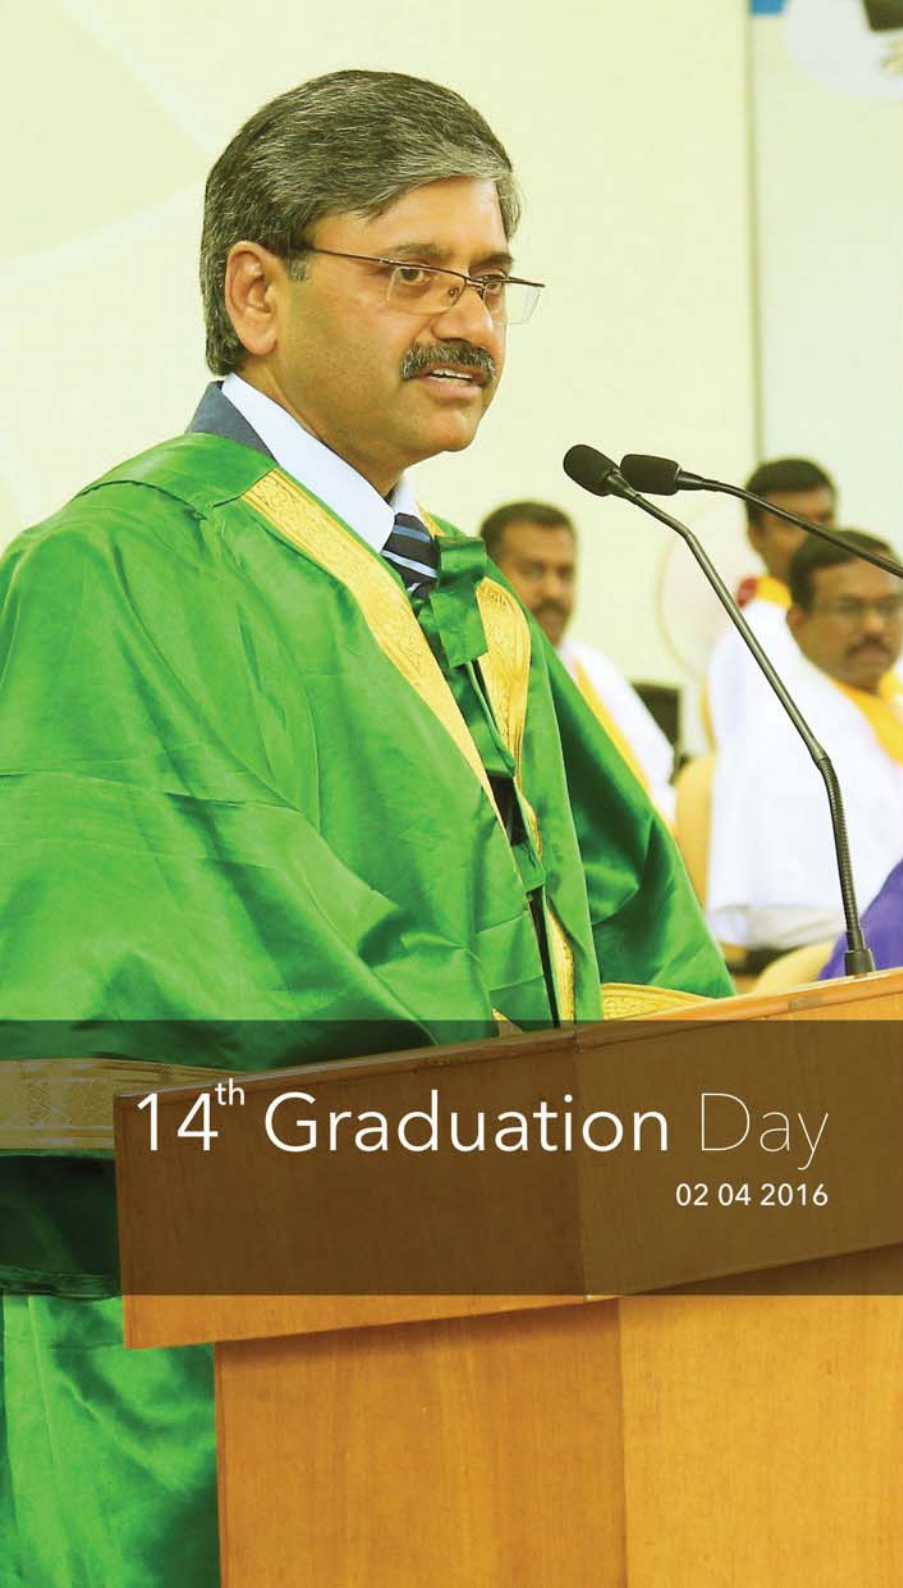

Mr. M. Harihara Sudhan, Correspondent - MCET talked on the importance of Arutchelvar Vidhya Sakthi scholarship and the management's commitment in empowering economically poor children pursue their dreams. He also wished all the beneficiaries good luck.

With the vote of thanks by the principal - MCET, the programme came to an end but the outcome of this programme is going to continue for many years to come.

There were smiles on the faces of all the students and their parents and few, couldn't hide their tears of joy and gratitude. The generation after Arutchelvar is determined to take the good works initiated by Arutchelvar Ayya forward, under the guidance of our able chairman Dr. M. Manickam and our energetic correspondent Mr. M. Harihara Sudhan.

# 14<sup>th</sup> Graduation Day

02 04 2016

14<sup>th</sup> Graduation Day started with a procession of the dignitaries from the auditorium entrance till the stage. The gathering remained standing until the procession reached the dais. The stage was then occupied by the chief guest Mr. C. V. Raman, Executive Officer - Engg., Research, Design & Development, Maruti Suzuki India Limited, Dr. M. Manickam, Chairman - NIA Institutions, Mr. M. Harihara Sudhan, Correspondent - DRMCET, Prof. C. Ramaswamy, Secretary - NIA Institutions, Directors, Principal, Vice-Principal and the HoDs. The auditorium was filled with graduates, parents, faculty and other invitees.

Secretary welcomed the gathering and listed the activities that the college has undertaken to help the students in terms of Placement, Higher Studies, and Competitive exams. While talking about the entrepreneurship, he mentioned CIBIE (Centre for Innovation and Business Incubation and entrepreneurship) and the role it will play in developing more entrepreneurs in the days to come.

Principal read out the graduation day batch's report. In his report, Principal mentioned that the 2011-2015 batch has achieved 48 university ranks and brought honour to the institution. He mentioned about the industry attachment programme which will give more hands on experience to the students and other MoUs that were signed. He told that 52 companies had visited the college so far, for placements and the number is increasing every week.

Chairman in his presidential address told that the next 20-30 years are going to be India's time. He reminded the gathering how talented our Indian youngsters in various fields through different examples. He told that India is the only country in the world with more young talents that are waiting to be nurtured and unleashed. He requested the gathering to identify their opportunities by facing the challenges bravely and make the earth a better place to live for the next generation.

Director-SA, Introduced the chief guest and invited him to address the gathering.

Mr. C. V. Raman started his address by appreciating Arutchelvar and his family for educating nearly 20,000 students a year through various institutions. He told that the family's legacy lies in their value of giving back to the society. He told that his experience started 34 years ago from a protected environment in the college to a more challenging world in Escorts, his first company. He narrated his experience of working almost 24\*7 and in all the roles such as manufacturing, assembling etc. He stressed 6 points during his speech and they are,

**Gain knowledge in the college and use it on the job** and update the knowledge to stay on the course. He called all the graduates to be accountable and only then he said they will be able to earn the trust of the company.

**Learn from the mistakes and rectify them.** He requested the graduates to make decisions not only to succeed but also to learn things well.

**Be open to change** and the change could be from the environment or technology. He called all the graduates for better imagination and making the imagination into reality for the betterment of the society.

**Working in Team and maintaining one's individuality.** He told that the Vitara Brezza car is the typical example for team work and in team work, he told that people will get more ideas.

He invited the graduates to **make use of the Make in India opportunity**. India is growing fast and engineers need to keep up with the growth and introduce more start-ups. He requested everyone to be adept and adapt the new technology to become successful entrepreneurs.

He called for **bigger ambitions** from the graduates and told that their world should not be limited by their perspectives about the world. He urged everyone to aim high and chase their aims.

After the speech by the chief guest the graduation ceremony started and the graduates received their certificates one by one.

# Curiosity did not kill the cat

*“Curiosity is like the first neutron that triggers a nuclear fusion reaction that results in a chain of huge power-releasing actions, which might break myths and solve mysteries.”*

Years ago, a veteran clubbed a positive attribute and a negative emotion; Lo and Behold! There popped a saying, (which is now being heard, read and spoken so often that it has become an obvious cliché) – “Curiosity killed the cat”. Does it ring any bells?? Prodding into a new arena?? Brace yourselves! These four words might hit your ears any time now! But what if the killer-stroke actually is an Elixir? What if curiosity doesn’t kill, but feed the Cat?

Gone are the days when Galileo’s curiosity was declared heresy, gone are the days of anarchy where asking a question was regarded unethical, gone are the days when people used to litigate you for throwing out questions towards them. The age has come, where superstition is dug for scientific substantiation, and where the truth is measured through science; but the dark side of this epoch is that young minds of today are stuck somewhere in between science and iconoclasm. The once dreaded words – ‘how and why’ – are the need of the hour today.

Remember?? When you were a little kid, you would stuff your parents/relatives/neighbors or any stranger, for an absolutely unwanted information- with a never ending series of questions. There are chances that your family still jokes about the lame questions you asked during your kinder garden years such as why are the crows black? Why hasn’t a tree grown from my stomach even after swallowing that apple seed? How does God look like? Why should I go to school? Why am I so small? Why on earth are we walking with two legs? Dada, where did I come from??– Duh! This very act of listening to a child’s endless quizzing drains one’s energy! Can you imagine the magnitude of thoughts that a puny little mass of grey cells – the baby brain had processed way back?

And now, it’s time for a reality check! On your marks, Get, Set, Go...

What are the questions we ask often? What is \_\_\_\_? Where’s \_\_\_\_? When’s the \_\_\_\_?

See the difference? The words ‘What’, ‘When’ and ‘Where’ are the venoms which have poisoned the productive world of how’s and why’s! (Knowledge doesn’t hurt. But mere facts do.) And that explains a LOT (Imagine a billion O’s in between ‘L’ and ‘T’). Maybe, just like today’s processors, the human brain loses out on computing power gradually as the years pass by.

Curiosity was the bridge through which the Homosapiens traversed across the vast sea between the Stone Age and the Nano-powered Era! If the so-called descendents of Adam & Eve had not been inquisitive to find solutions to the daily challenges they had faced, the earth would still be one big, cold, dark, dormant cave! If that apple hadn’t hit the right grey cells, Newton wouldn’t have etched his name on the annals of history and science. Everything would still be lying dormant in the womb of Mother Nature. Between Newton’s Apple and Steve Jobs’ Apple, the indefatigable spirit of living in the world of how’s & why’s and the incessant quest for answers, is the only link.

**Z Khalidha Banu**

III EEE A

Curiosity is like the first neutron that triggers a nuclear fusion reaction that results in a chain of huge power-releasing actions, which might break myths and solve mysteries. Curiosity is to the mind as electricity is to a switch. Without the former’s presence, the latter is always in the OFF state. Asking questions fosters a healthy idea-sharing process, which in turn helps to build a better learning/working environment.

Come what may – Boom or Doom – it always pays big bucks to curious people. Time to alpha-up! Let the resilience to thoughts be overcome by the agility to learn. Let curious musings pilot a fleet of productive thoughts. So, when was the last time you pondered and let your mind wander in the swirling world of thoughts? When was the last time you brainstormed ideas over trivial issues? When was the last time you embarked on a journey in search of answers?

How about starting it all over, N-O-W?

Time to Bell the Cat! Get, Set

.....Goooooooooooo

## Proud to be a Mech

Like our every plan this one started as a joke but this time, it turned out to be a different one. I'm sure, that almost all of my friends were never familiar with the word contraption until we did one. I was tired explaining it with the example from the 'Aboorva Sahodhrargal' movie to everyone before starting our project on a Friday evening, a Good Friday evening, to be precise.

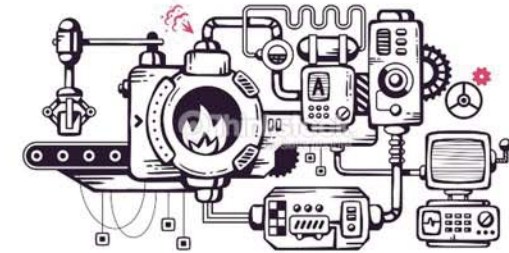

Since I had never been part of a project, I didn't have any idea how to manage that, but my nervousness increased when one of my friends told me in a mild voice, " Machan, the project entirely depends on you da. I have my entire trust on you". (Later I found that the scumbag used the same dialog to each and every person to motivate them \*sigh\*).

Our work was supposed to start on Saturday morning 9, but I was late on the first day. We divided the volunteers into 4 per team and my team had people who were more skilled than me. Inspired from the YouTube videos, we began our project. The plan was that each team should do as many number of contraptions as possible in 3 days, because we needed at least 3 more days to assemble them all together. It may sound easy, but it's not. The angle, pressure, velocity, area.... never been serious about these things in my entire life, not even while studying this as a subject, but we did about 5 contraption units and two were our own innovative ideas. We laughed, teased, made fun but never forgotten our aim.

14 hours a day, 6 days...7 reckless nights which tested our patience, health, temper, sleep, hunger, everything but none withdrew. We slept after 2 am, came back to our business at 7 am. People who were in a 16° air conditioned room may comment that our work is a kid's play but I would suggest them to work an hour under the sun to feel how it would be. The best thing is that none complained and none boasted (maybe I'm doing that now). Some people said that we, Mechanical Students, are not yet cultured, I only pity them. It's true that we make noise, we sound morons, we talk nonsense, and we may look dirty, but we are happy and proud for what we are, we are united, and we are Mechanical Engineers.

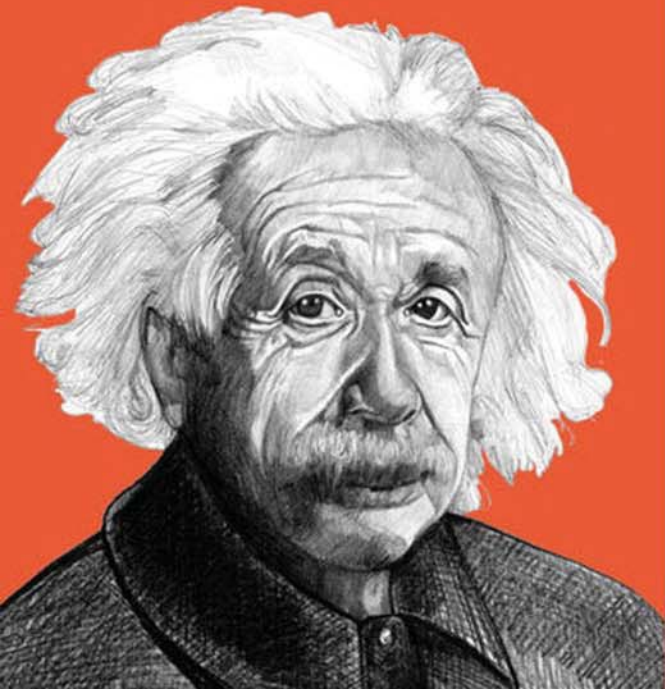

**Vishwanathan**

# Smartness of being Positive

We all might have heard that “Being positive can make anything and everything possible” and this has influenced me in staying positive. Months ago, I had a feeling of discontentment for being a pessimist. When I started changing my thoughts to be positive, I had the problems in same number but the difference this time was in my approach. I have gained enough courage to face them by not thinking it as a problem but as stepping stone in shaping myself. I have started looking at people, thing and events positively. The art of being positive has changed my life and set me in a mission which I thought was impossible. It has brought me the important things in my life, and has taught me to be patient and handle problems easily.

To stay positive, I read many quotes on positive life, think positive, and other motivational topics.

Whenever I felt something abnormal in my behaviour or my thinking pattern I immediately reminded me of the appropriate quotes for my situation and it helped me ‘come back to normal’. This may seem to you bit cinematic but it does. You can just try it!! Later on, I was able to see myself changing gradually and I started to convert every second of negativity in my life into positivity. I had a mind-set that “I should be away from problems” but now, I always think “Problems are also part of life and face them bravely to move on with your life”.

Being positive and staying positive not only shape your mind but also your character. We may not feel the change all of a sudden but the magic will happen slowly, steadily and sharply. It is hard to avoid negativity all of a sudden and a bit of negative thoughts may stay in our minds at times. Reading motivational and optimistic quotes may surely change this state of mind and help you stay focused. The ultimate thing is to stay positive and do whatever helps you to be positive.

Anusuya D  
III EEE

“BE POSITIVE,  
EVEN WHEN YOU FEEL AND  
SEE THINGS FALL APART”.

Gone through the recent newspapers?? Skimmed through a heart-breaking notification from News Hunt?? Viewed a so called viral video in Whatsapp?? If yes, this article is all about the truth behind the crime scene which took place at udumalpet few days back, involving a lovely nice couple and few heartless goons. This crime has shattered the hearts of many and has brought insecurity to those cupid valentines in and around the area to a new insecurity. The silhouette of this crime is caste discrimination.

### **Caste Discrimination**

The separations of people into social groups (castes), where assignments determined by birth are fixed and hereditary. Here, “**INEQUALITY**” is the nucleus of the system. Everyone in this world are free and have equal rights and no one can force his/her opinion upon someone else. One of the biggest pessimistic traits among caste followers is the dislike for mixed caste marriages.

Considering the mixed caste marriage system, no one has the right to oppose those lovely pairs, not even their parents, but now-a-days people are musing with the lives of the youngsters in the name of caste. Protection must be given by the District Commissioner of Police and this has been stated by Ms. Latha Singh in her case and it was also approved by High Court Judge Sri. Markendayan Katchu, but right now ‘judgment is just a piece of paper, torn according to the will of those evil slaughterers’.

### **Who is responsible God or Man?**

The caste system is a social stratification which has its origin at the pre-modern era. It was revised by the British Government and today it is the basis of reservation in India.

## Continued

This caste system has been started during the Vedic period (1500-1000BC) between two Varna groups named Arya and Dasa based on their occupations. Later on, it surfaced as Kshatriyas (Warriors), Brahmins (priests), Shudras (slaves) and Vaishnavas (Nobles). At present, many castes and communities have been created thereby spoiling our country. Modern youngsters do not care about all these religion and caste stuff. If every youngster starts to follow Newton's Third law (**Every action has an equal and opposite reaction**), then the caste system is just a residue.

### Do we still need this system?

Caste system was introduced in the name of God and maintained well by the so called "High Class People". Common men struggle the oppression from the hands of these hooligans for more than 3000 years now. These hooligans' hearts are stained with the blood of the innocents for many hundred years now. What are we going to do? We are together when we study, we are together when we work and are we going to be separated by these foolish caste superstitions when we go out?

No! Certainly not. We are going to prove the world otherwise. We are going to make our national pledge "We are all Indians and we are all brothers and sisters". Jai Hind!

# Eyes Behind the lens

I'm one of them, a person who shoots a bird, an animal, the people, and helps to freeze that enjoying moments of one's life of joy and sorrow eternally. Yes! It's an art that transforms and stores the moments of everyone's life. Inspired by the World's No1 BBC World Wildlife Photographer Mr. Kalyan Varma who I met in Valparai, I developed my enthusiastic hobby, my passion, Photography!

It's a lifelong hobby for many people across the globe and even career for many enthusiasts. When you are out to shoot, it's like you are holding a Barrett, holding your breath, waiting for the right moment to shoot by triggering with your index finger, freezing that fraction of second through an eye behind the lens. When you get a perfect shot, an immense pleasure and ecstasy would engulf you. It is as fast as a blink of an eye shutter that shutters the lens to capture it.

Your imagination of that shot will be affected by the temperature, the humidity, the wind that blows away your target. Your attitude and patience would determine the altitude of that candid shot and you should be like a sniper.

Photography does change many people and the world changes with it. It is not what gadget you have in your hand to shoot. It actually depends on what you click and how you expose the picture. A picture can speak a thousand words. Not all the man who carry the DSLR Camera can become a photographer. The real background lies in the interest he shows in the Manual Setting of the Camera to get a good shot and there lies his real talent.

ALPHUS JOE PAUL  
III Auto

Yes! The life behind the lenses is a great profession and an ecstatic hobby. Have the frame, scroll the shutters, choose the moment and just shoot the world! And I too stood there with my eye behind the lens.

# Android 6.0 Marshmallow

As the earth rotates 24x7, technological development is in the zenith of its progression. Each and every new day, loads and loads of super-wiz gadgets make their way through the global market, attracting millions and millions of customers. Android smart phones stand tall among those gadgets. Don't be fooled by all those clumsy updates hanging from your notification bar all day long, the real update comes directly from the Google Android Inc,. Moving along the line of historical updates starting from the Alpha version to the Lollipop version, Google Android Inc. is on the verge of unleashing the most awaited and the most seductive Android operating system, the Marshmallow, version 6.0. Google claims it to be the most efficient and the most attractive version so far.

There are lots of new innovations and awe's in Marshmallow from which few are listed below.

**#App Permissions,**

**#Now On Tap,**

**#Fingerprint Support,**

**#App Links,**

**#Doze,**

**#Automatic Backup and Restore.**

**Application Permissions** have been completely overhauled in Android Marshmallow. Now you will be able set permissions individually, unlike the previous models where it is either permission to all or nothing. This is going to revolutionize your security in Android platform.

**Now on Tap** takes the concept of the smart assistant Google Now, and it activates the facility on the entire OS, so you can take advantage of it on any screen, regardless of what you are doing. You just need to press and hold the button, and Now on Tap will do the job for you by searching for the information you are looking for.

We've seen Android phones with **Fingerprint scanners**, which was built by the vendors. To add to the security features, Android Marshmallow will enable fingerprint scanners on phones.

# Continued...

This will allow the scanners not only to unlock your device, but also to use it for authorizing payments using Android Pay offline world or within Play Store apps.

**App links**, also known as Intents, is a feature that helps you with all the app that could open a type of file. Normally our phone shows the apps installed in our mobile in opening that particular programme, for example – an image file; the entire app list that can open the link will be shown and you will be asked to choose the one you want to use.

One of the most common complaints faced by Android users is the standby times which are not regular on their phones. It happens due to the various apps running in the background, which in turn affect the standby time and performance. Google has introduced a feature called **Doze to take care of this issue**. This artificial intelligence technology learns your phones behavior over a period of time and detects the idleness of your mobile, to take it to a deep sleep mode.

**Back up** is something which everyone wants to have in case they have a problem, which was missing from Android for years, and it has taken some steps to rectify it finally. With Android 6.0, the backups can be set automatically, so that you don't need to worry about losing data, in case you have a problem with the device.

## ANDROID FACTS

Android, Inc. was founded in Palo Alto, California in October 2003 by Andy Rubin (co-founder of Danger), Rich Miner (co-founder of Wildfire Communications, Inc.), Nick Sears (once VP at T-Mobile), and Chris White (headed design and interface development at WebTV) to develop, in Rubin's words, "smarter mobile devices that are more aware of its owner's location and preferences". The early intentions of the company were to develop an advanced operating system for digital cameras. Operated secretly, revealing only that it was working on software for mobile phones. That same year, Rubin ran out of money. Steve Perlman, a close friend of Rubin, brought him \$10,000 in cash in an envelope and refused a stake in the company. In July 2005, Google acquired Android Inc. for at least \$50 million.

# Riding Bike

A passion

'Yesterday is history  
Tomorrow is mystery  
So ride and live today.'

When I was a kid, I was always fascinated by adventure, and that fascination never abandoned me. Even today, I'm very much ensnared to adventure. Be it on my motorcycle or in my everyday life, I always address my fear and step out of my comfort zone. I just wanna say that I acknowledged the risks of biking at the age of 18 and you know what? I'm never afraid of riding.

When I first rode, I got vibes, I felt high, and I experienced the rush of adrenaline pumping through my arteries and veins, from then on riding became my love, my stress relief assistant; it became my passion, and my treasury trait without which I would just be a broken humpty-dumpty. The very thought of riding helps me a lot, it aids me to clear my mind, it takes me to a place where I could feel the breath-taking euphoria, and the immense gratification.

I used to practice race riding using on-road bikes, but eventually I enrolled myself to the national level dirt bike racing tournament, which was an off-road event, and so I started practising to ride the off-road dirt bikes. To my amazement, I won the fourth place in the tournament.

Although I was not recognised in front of the huge applauding crowd because I was not among the first three places, that moment started a fire inside me. This achievement made me feel that I have got a great beginning and a splendid future. Now I'm practicing hard with dirt bikes to achieve the MRF National Championship'17.

A small mistake doesn't elucidate the difference between a win and a loss, but could very well mark the difference between the life and death. So, according to most of the people, motorcycle racing is one of the deadliest sports ever with several motorcyclists all over the world dying in accidents, but for me it's as basic as breathing. Last but not least I would like to quote

**"YESTERDAY IS HISTORY  
TOMORROW IS A MYSTERY, SO  
RIDE AND LIVE TODAY".**

R Navaneetha Krishna  
III Auto

## NEW WORDS

1. PROD      2. HERESY      3. LITIGATE      4. ICONOCLASM
5. INQUISITIVE      6. INDEFATIGABLE      7. INCESSANT      8. RESILIENCE

## USEFUL PHRASES

1. **Chase your tail** – Spending a lot of time and energy doing a lot of things but actually achieving nothing.
2. **Get the show on the road** – Putting a plan into action
3. **Keep your fingers on the pulse** – Being constantly aware of the most recent developments
4. **Sail through something** – Being Successful in doing something without difficulty
5. **Get ducks in a row** – Getting your things well organised.

Use the blocks and identify the words / complete the puzzle and send it to us to win a pen

## THE END

I continued to read my pages of history and every page brought a mixed emotion; I cherished some of them happily but there were also some bitter moments. If only I had a time machine I would go back and erase those bitter moments that are written on the pages of history or I would live them as I have designed them now. I didn't expect life to take such unpredicted turns and land up here with my son! But life taught me that anyone could achieve greater heights irrespective of their caste, creed, religion and nationality but in-order to achieve such heights one should rely more on their hard work! I have seen those kind of hard working people in my life. Every single character that I had come across in my life taught me something which was very helpful to sculpt my life; I think this helped me to guide my son. As my thoughts were roaming around, my son and my daughter-in-law came home with a happy news that the doctor had told them that they can expect the delivery by the mid of next month. I was on cloud nine because I am going to be a grandfather and for the first time in life, I thought my life was complete. At last a happy ending to my story and a happy beginning to my son's life!
