

Contents

- ❖ Compressed air generation, compressor types
- ❖ Compressed air conditioning, drying and distribution
- ❖ Directional, flow, pressure and isolator valves
- ❖ Single- and double-acting cylinders
- ❖ Holding element control, impulse valve
- ❖ Velocity and stop control
- ❖ Distance-dependent controls, limit switches
- ❖ Time- and pressure-dependent controls
- ❖ Sequential controls with signal overlapping
- ❖ Basic circuits of electro-pneumatic systems
- ❖ Introduction to the vacuum technology
- ❖ Symbols and circuit diagrams according to DIN ISO 1219
- ❖ Bases of the component design
- ❖ Practical exercises at the pneumatic training system

Learning targets

- ❖ Understanding the basic set-up of a pneumatic system
- ❖ Understanding the function and set-up of selected pneumatic components
- ❖ Being able to prepare pneumatic diagrams
- ❖ Handling pneumatic systems during planning and in the operational everyday life

Pneumatics Laboratory
