WISE TALK

BEWARE OF
LAYOFFS

HARASHAVARTHAN

III CSE

LAY OFF, a word that keeps threatening the employees from all the companies and institutions of almost all the sectors. The recent lay offs from big IT players have almost questioned the existence of many employees who are working in those companies. There are various reasons for the lay off such as, the role of automation, changing government policies, emerging new technologies, lack of business, incompetence of the employees etc. Well, if someone asks me, is it any good, I would only answer that India should move on to the manufacturing area and bring in more research centred jobs to compete with the global recession and lay offs because most of our private sector jobs depend on other countries' services. The changing socio-political environment will directly affect the job market in India. One thing which the employees can control is updating themselves with the changing new trends and technologies.

It's time for India to revisit its stronghold, obviously it's agriculture. Only in India there is a misconception that an educated person shouldn't get into agriculture instead they should work in an office. When educated people move to cities in large number looking for job, agriculture will be abandoned and the farmers will be forced to sell their lands for cheap price. This will only help the land to become barren and dry. Western countries thrive with what they have and they don't copy anyone. In India, everything is a copy including the dress that we wear, the food that we eat and the hobbies that we build. It's time for people to focus on new innovations in farming and create jobs not just in agricultural sector but also create value added job opportunities in engineering, transportation and marketing.

Manufacturing should be the new buzz word that should drive the students of India, only then there will be jobs. It's time for India to focus on research and development to create more opportunities for the students to involve in researches. The curriculum needs a revisit, the approving system for schools and colleges needs a revisit, the mark scoring system needs a revisit and the research and development programmes need a revisit. It's time for a transformation without sacrificing the natural resources and it's time for a make over without polluting the national integration. Let India Progress.

Editorial

THE PURSUIT OF HAPPINESS

- HAPPINESS IS ABOUT LIVING IN THE PRESENT

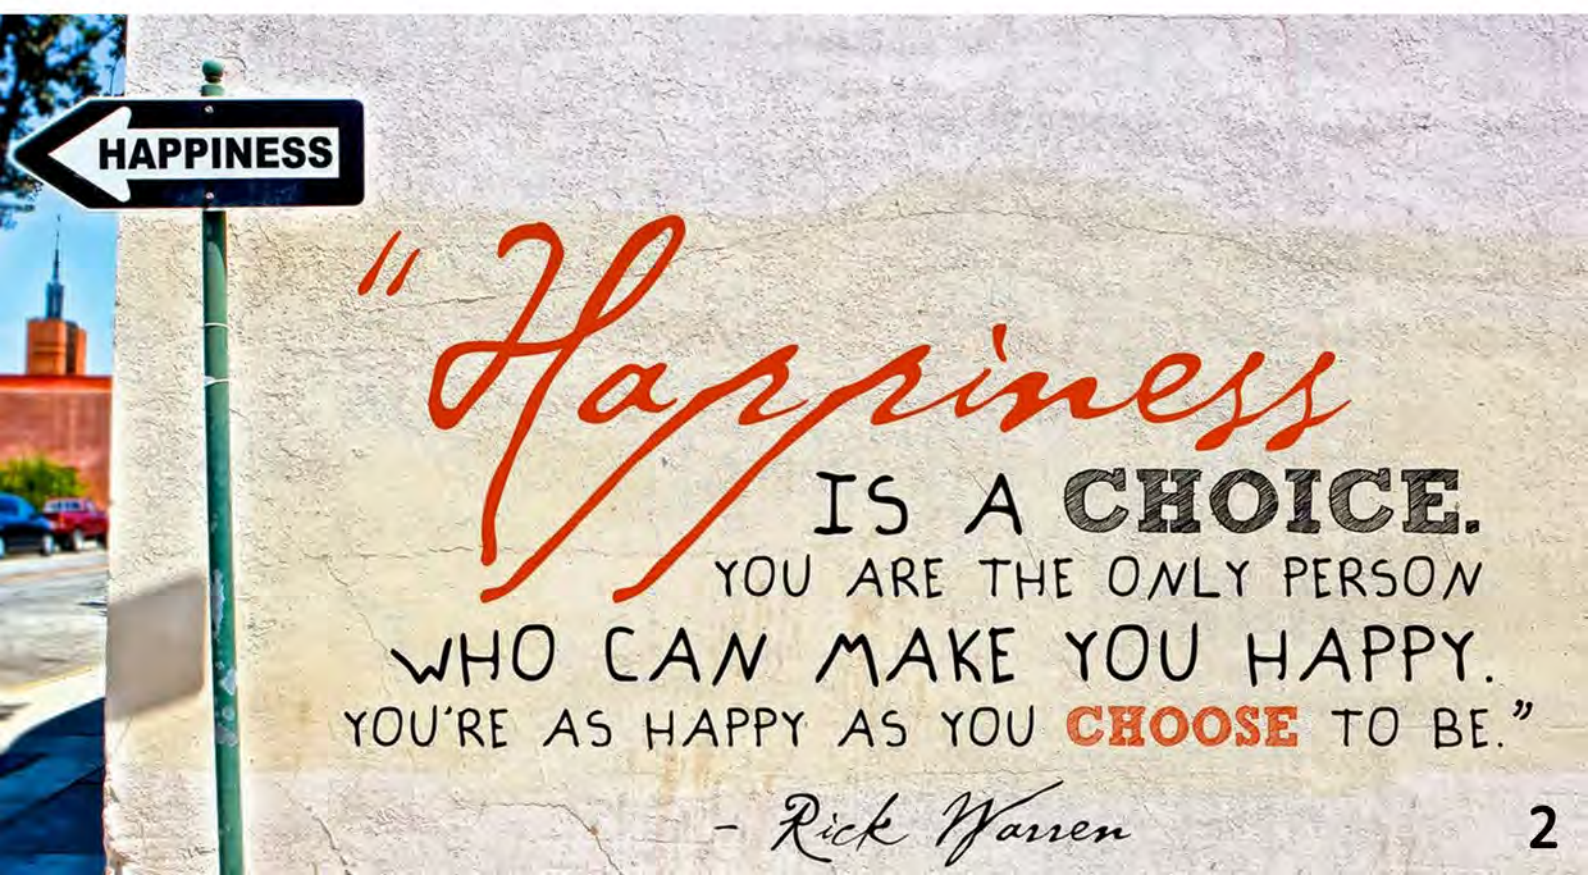

Try to articulate this thing, what is life? In a way it is a certain span of time. Both the ends of the life is fixed from Birth to Death and mixed with happiness and sadness. I want you to be conscious of one particular thing that death is inevitable. We think, we have done great things in life but the only thing that is happening existentially is that we are moving towards the grave. So what's the whole point in walking all the way to the grave?

According to me, we can at least make our journey to the grave blissfully. If someone asks us, would you like to be happy or miserable, what will be our answer, obviously we would choose happiness because it is the sweetest way to exist. Remember, whatever happens in our life, we should remain happy. Even if our parents die tomorrow our happiness cannot be taken from us and I do not want it to happen tomorrow but that day will come for sure. I remind you of our parents' death here because that will be the most painful moment and event in our life and we need to stay strong even in that moment. I am not saying you to go and laugh in someone's funeral but just reminding you to maintain your integrity even when the sky falls. There is a quote "It is easier said than done", Yes it is true, but it's not out of our reach.

THE PURSUIT OF HAPPINESS

Even when we wake up one day morning and find ourselves lying in the streets as beggars having lost everything that are valuable, but never lost our happiness then we have a balanced mindset. This balanced mind is what we term as the source of happiness and if we have it, what's more one can ask for. Let's see this as an example, if there is an exam tomorrow we would be miserable today thinking "What if I score low marks or get failed". See, it hasn't happened yet, so it's only an imagination about the future which causes misery. Next thing, if we really fail in that exam we will be miserable and this time it is the memory of the past that causes pain which is also not a present reality. Don't get me wrong, I am not saying not to study but I am only saying that "We suffer only because of our future imagination and past memories". Our sufferings are only rooted in our thoughts about yesterday and tomorrow and they have no business with people who live today and now.

THE PURSUIT OF HAPPINESS

If you think little deeply, the source of memory and imagination is in our minds, so all the sufferings are cooked up in our heads that proves that it is not an outside happening. Beware, that if we are able to derive happiness from our past memories and future imagination, then the reverse is also true that we are bound to suffer from the same past and future. The main motive is to be free from the very memories and imagination. If we see this scientifically they say there is a certain chemical reaction will happen in our body when we are happy or miserable. Other way around, if we think positively and stay strong, we will generate blissful feel but if we think of failure and weaknesses, we will only generate misery, so the choice is in our hands.

Happiness and misery, both are developed in mind and both develop as we develop. It is also affected by a person's lifestyle, environment and belief system and what we believe, we will become. If we believe in happiness, we will be happy even without any material benefits of life and if we believe in misery we will be miserable even with all the wealth. It's only a state of mind.

LAYOFF'17

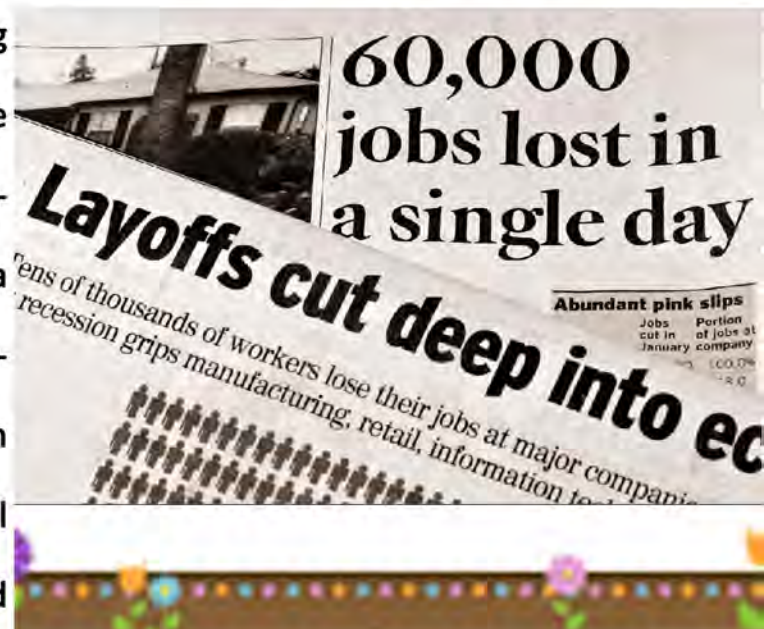

Layoff

We have automated almost everything in the manufacturing industry from small toothbrush to Manufacturing machines. Now, the result of automation has led to layoffs in many industries, especially in the IT industry as most of the operations and processes have been automated. We can't place the reproof on automation for layoffs, but we should put the reproof on ourselves that we did not equip ourselves to meet the Industrial Revolution to Advanced Digital world.

Cognizant is all set to cut at least 6,000 jobs this year, which represents 2.3% of its total workforce, as it struggles with the growth in the IT environment that is fast shifting towards new digital services and also due to the impact of automation on lower-end IT jobs (programming and lack of skills). The layoff will also include non-performing employees. These employees include those who are not updated with the recent elevation in technology and who have low-level implementation skills with whatever they had learned from primary to Higher education.

Now the IT industries are in need of smart and skilled workers than programmers and people who are good in the low end IT works (programming and other low-end jobs). If the programmers are skilled and smart in working with advanced technologies, the percentage of layoff will stay at a minimum level or zero. Machine learning has automated the programming where computers can generate codes for a given scenario which will eliminate large number of programmers sitting and coding for several hours.

Cisco has announced that it will lay off 7% of its global workforce in 2017, while IBM has announced 5000 job cuts, both with plans to reinvest money in priority areas such as internet of things and cloud computing. Microsoft, on the other hand has decided to cut over 2800 jobs this year as it plans to wind up its smartphone business.

In future, the key to layoff will rest in the hands of higher educational Institutions where students will be introduced to Advanced technology concepts in their curriculum. Reframing the curriculum with more practical learning and imparting skill-based learning from institution's end and more self-learning from the students' end might solve this issue. Indeed, we students have to keep in mind that, learning and Studying are two different concepts in the theory of Education. We learn something to implement in life and job but we study only to score marks. Studying will make us marks producing machines but learning will make us to create technologies of our own that will revolutionize the technical world. Learn in such a way that you get benefited for life not for just a semester.

HARASHAVARTHAN
III CSE

Want to escape from LAYOFF in future? Try to develop a practical mind, enhance your skills and start implementing what you learn. Move to Advanced technologies by trying to explore the world of technology with an engineering mind and never stick to the books alone.

MY BASKETBALL DIARY

-A MOMENT OF HAPPINESS

It's just a basketball match! "Why do you want to go for that?" asked my Line Manager. I tried to explain her the importance of this match, but failed miserably. Finally she nodded her head in agreement and I was on my bus to Udumalpet. 4 years of college life ran like a movie in front of my eyes. Shakthi trophy is an inter-college tournament played among various colleges under NIA group.

Out of those, MCET (my college) vs KCT basketball match is always a nail-biting thriller like India vs Pakistan matches. **Being on the losing side is always painful.** During my first year, I was the only 1st year guy playing in the mains and we lost the final against KCT by a single point. That is still the most painful moment in my life. MCET 54 – KCT 55 said the scoreboard. Their celebration hurtled us even more. We had to wait for a whole year for payback.

The Payback:

The tide was on our side this time. We played with our hearts out in a muddy surface. The scoreboard was 55-53 in favour of KCT and the previous year memories started to haunt me in the final minutes. In the dying seconds, I managed to score a buzzer beater pushing the game to extra time. Our energy level was so intense that we completely dominated them in the OT and won with a 10 point lead. James Anna, my Basketball coach kept guiding us throughout the game and we dedicated our victory to him. My 3rd year match was a disaster and with no-one to guide us, we were completely outplayed by the KCTians.

MY BASKETBALL DIARY

One last game: With all these memories running on a loop, I went to talk to my team on the match day. This was my last day as Captain and I wanted to end the day on a high note. Giving a motivational speech and discussing the strategies for the match we went to the venue.

Our semi-final game was a cake walk and we completely dominated our opponent. I shuffled my main team continuously, so that no one would be tired for the big game.

A game of minds:

We didn't have enough practice prior to this match. Lacking someone to guide us was strongly felt during the 3rd year game. Every one shared their thoughts and strategies for the game and I tried to keep them positive all the time.

The final:

Jump ball went its way and we pulled things together and kept the scoreboard ticking. We were all pumped up and were playing our nerves out. We didn't give them any easy points as we worked out our strategy perfectly, **Go solo for scoring and back each other for defence.**

They constantly made us to make fouls and we took a timeout to make few changes.

Pushing the limits: Without proper practice and fitness, I was pushing myself beyond my limits. The thought that, I should make this game count, kept me moving further. We went 10 points ahead of them, but still we didn't release the pressure.

Final moments of the final game: With both the pivots on the verge of getting fouled out, we were holding our nerves to end this match. The crowd was behind us, cheering for every point.

KCT played with their hearts out, but they couldn't reduce the point difference. The Referee's whistle brought the epic game to an end. It's not just a game: We gave 3 cheers to KCT. (Loudest ever cheers that we made). My teammates came to me one by one and gave me a hug and said, **"This is for you bro, this trophy is for you"**.

I was overwhelmed and lost in excitement without words to speak. I ran out of words to thank them. We clicked a winning group pic that I always wanted to take. It was time for the prize distribution ceremony and my teammates pushed me forward to collect the trophy. I received it with all eyes on that gleaming trophy for which we waited for a year.

We call ourselves the Big Shots and that day we proved that beyond doubt.

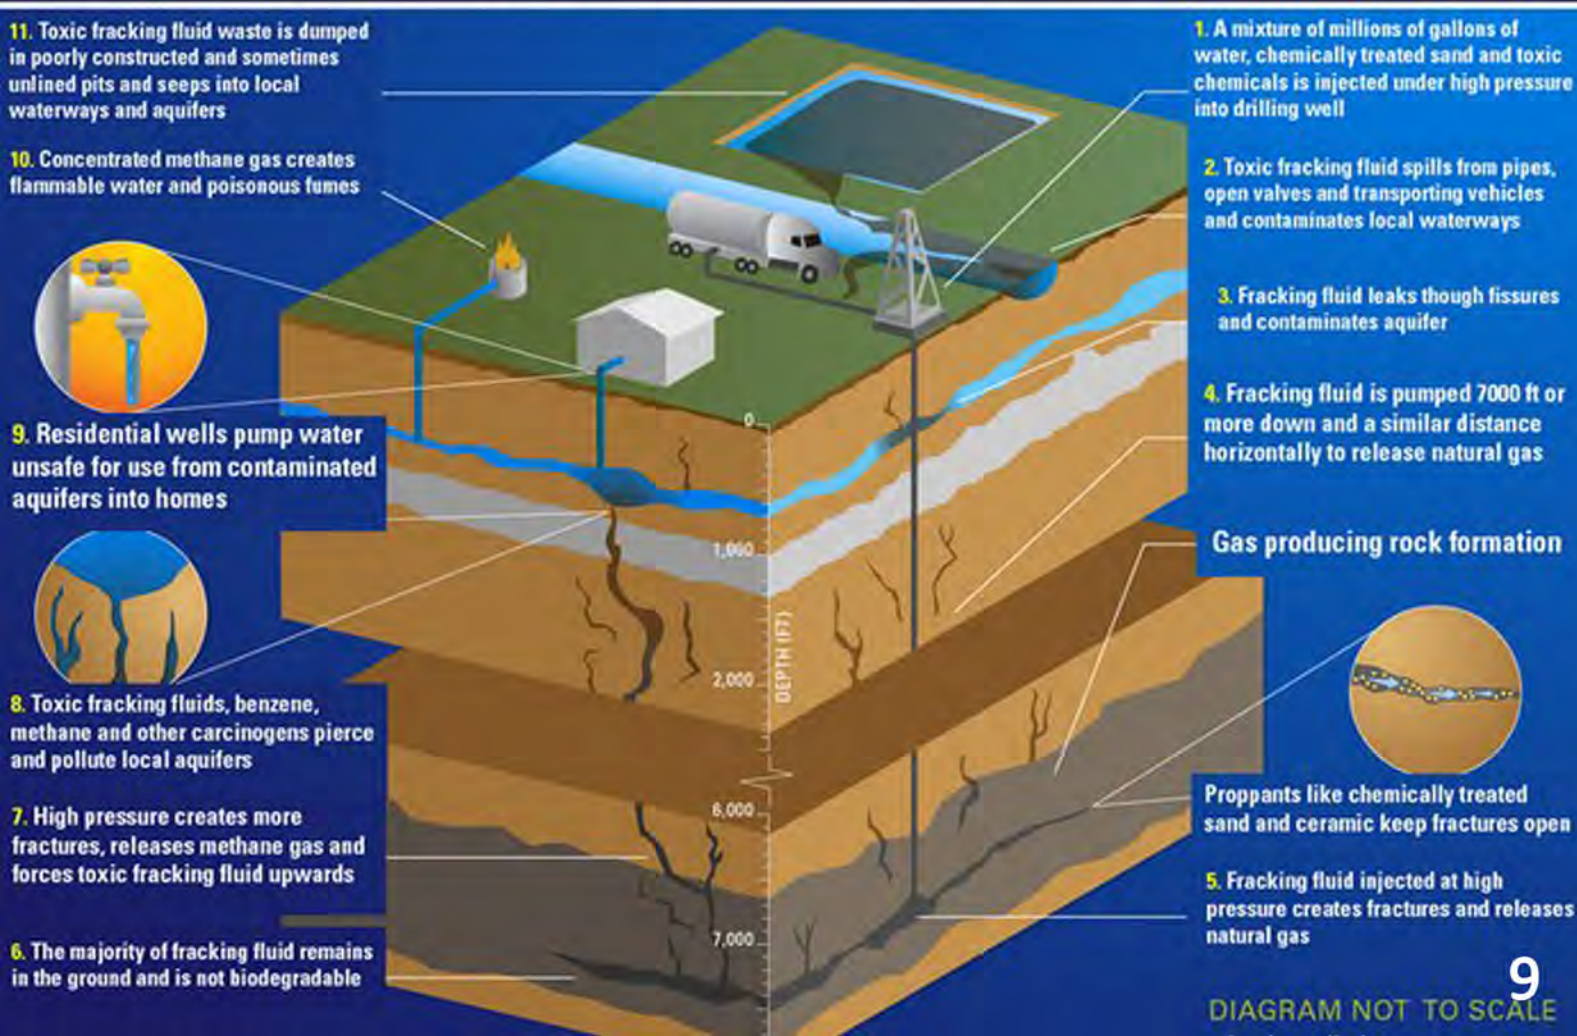

HYDROCARBON PROJECT

A DEVIL IN DISGUISE AND A SILENT KILLER OF AGRICULTURE

METHANE -The chemical compound with formula CH_4 . This statement not only refers its address but also its nature of combustion. We are in the modern world where the population is high so the demand is also high. We need huge amount of energy, food and shelter. Since we are running out of non-renewable resources, we have to use an alternate source of energy. A project named "HYDROCARBON EXTRACT" is initiated by the government as an alternate way for producing electricity.

Generally, Methane is present in between the layers of coal and rocks which are present below the underground water. "Hydrocarbon fracturing" is the method of extracting methane from the underground. The extraction and manufacturing process demands investment. Nearly, Rs.5000 crores of rupees and probably more than that is invested for the methane extraction. The extraction is done by drilling well to a depth of 6000 feet vertically and several meters horizontally.

HOW NATURAL GAS DRILLING CONTAMINATES DRINKING WATER SOURCES

HYDROCARBON PROJECT

Once the wells are drilled, a chemical composition of 635 chemicals are pumped into the wells and this will break the rocks present underground. The broken rocks will release the methane gas from the soil and rocks and pipes are sent into the underground soil to absorb the methane gas. Methane gas is highly combustible and injurious to health. Several complications such as breathing and water pollution will be the aftermath faced by the people. In fact, the effects are unbelievable it might slightly improve the economy but on the other hand, it would entirely destroy our agricultural lands.

“Tanjore,” an area located in the Cauveri delta is called the “Rice bowl of India”. 80% of the people living there are farmers and agriculture based families. The soil present there suits only agriculture and it is famous for its wealth. Tamilnadu Government gave opportunity to the private multinational companies to introduce hydrocarbon project in “NEDUVASAL” of Pudukkottai district. This will greatly affect the farmers and as a result of this project nearly 12 farmers had committed suicide in a time interval of 10 days. Nearly 30000-60000 sq.kms lands are taken for this project and generally, this project will increase the electricity production. It would also bring about a large amount of profit to the country.

HYDROCARBON PROJECT

Methane can be extracted even in the waste land but the question is “Why the companies are eager to extract it from the agricultural land?” The MNC that has undertaken this project has planned to drill 2000 wells for the extraction. At an average, a single well requires 8 crores and 66 lakhs liters of water. So as a result, a large amount of water is needed to extract methane from 2000 wells. This large amount of water is planned to be taken from the Cauvery River. So the people living there will be forced to face a severe drought in the nearest future. Once methane is extracted the soil will lose its texture and its essential components and the farm lands will become waste lands.

Nearly 8,00,000 lorries of sand is required for this project, which will lead to the complete eradication of soil ecosystem. If methane enters the water table, it will completely immerse in the underground water. This will change the nature of the water by its burning capacity. Nearly, 635 CANCER inducing chemicals will be pumped to the wells to extract methane which will ultimately result in the reduction of the water quality.

Nearly 1,64,819 acres of land is chosen for this project all over Tanjore and Nagapattinam districts. Agricultural areas like Tanjore will become a desert as soon as the project is implemented. Once this happens, the land will remain infertile. So, once again people have to give their voice against THE SOCIAL CRUELTY realizing the fact that India is an agri based country and by killing farmers and farming, we are not going to achieve anything.

“Farmers are not asking for their Food or money;

They are begging for an opportunity to quench our hunger”

Pradeep Krishna. G

MEDIA & THE SYSTEM

- AN UGLY TRUTH

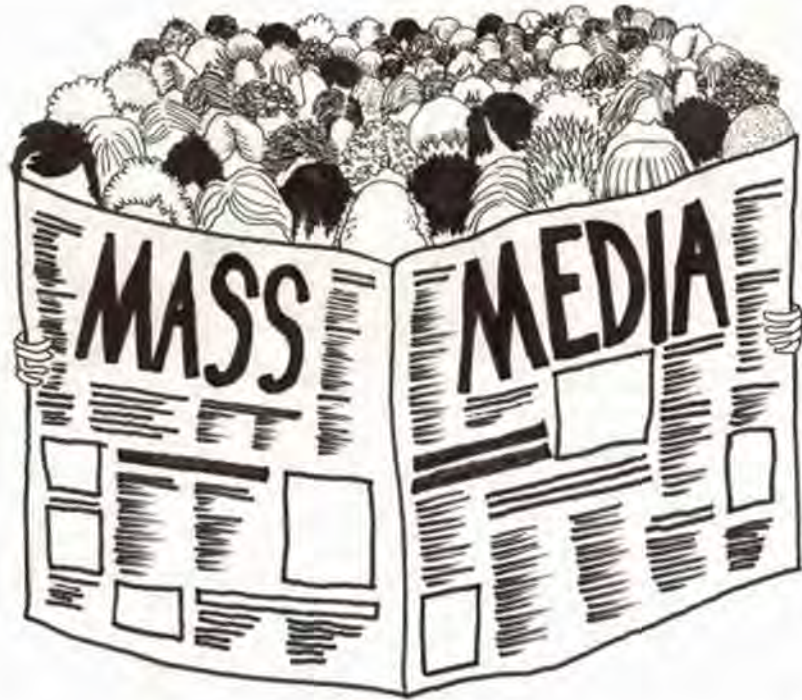

“Stuck in a generation where loyalty is a just a tattoo, love is just a quote and lying is the new truth.” – Anonymous

There are 1500 newspapers, 1100 magazines, 9000 radio stations, 1500 TV stations, 2400 publishers owned by only three corporations. We all know that media provide NEWS and information from around the world. The reason I stress on the word “news” is that news is meant to be the truth, the whole truth and nothing but the truth, but sadly the “media” in which unfortunately we seem to have placed all our trust upon has a hidden, much darker face.

It’s more on how the media portray the information they give us. In recent events, President Trump stated that he will deport all illegal Muslims and Mexicans for security reasons of his country whereas the media of his country states that Trump hates Mexicans and Muslims. The freedom of press is a privilege not a right but media has become more like a business where the government controls its people and their thoughts so that a single individual’s want could be met. They act as the agencies of rich people around the world.

MEDIA & THE SYSTEM

Corrupt politicians and fake media are not the only problem but the problem lies with the mindless people who keep voting for them. To cut a long story short, media is manipulated by the governments and they have formed a system which is to project lies as truth. We live in a society which is divided by politics, divided by religion, divided by opinion, divided by different mindsets and with people who spend 90% of their lives hating each other.

Every party in the world owns a newspaper or a television channel to spread their lies. A common man is often confused as he witnesses the same news with different morals and ends. Media keep people confused to take their TRP rate high and attract more advertisements. The real faces of the media are cruel and heartless. Media can make or topple governments and organizations; of course people like spicy news without realizing the hidden harm. It's about time that we realize that it is easier to control us when we are divided. How come we never have enough resources for feeding the poor or develop our cities, but always have enough and more manpower and ordinance to wage war against Pakistan? Democracy is like you owning two cows and your neighbors decide what you have to do with them.

"The truth is still the truth even if no one believes it. A lie is still a lie even if everyone believes it."

Kaushik Shankar Subramanian

VALUING MOTHERS – A LATE REALIZATION

Bow and arrow had a lovely daughter and she was the princess in their castle. They treated her as the queen in their kingdom and piped all their affection towards her. She was given complete freedom and the princess enjoyed it with felicitousness. All the kith and kin invariably declared, “Single child will enjoy all the fun”. All these remarks made the princess become more proud of herself but she wasn’t aware that the same pride was eating her.

Things went on well until loneliness became her companion. Her furiousness lowered her marks in studies and an abrupt change in her life transformed her character in a different manner. Our princess was about to celebrate her 16th natal day and the D day was on Nov 20th. She started browsing through the online stores with her amiable mother. Day before the night of her birthday, the preparation for the felicitation started but the day waited to disappoint her in multiple ways. An abnormal silence prevailed in her mind.

A day of enjoyment had become a day of sorrow because on the early morning at 4am a hand tapped the princess which she thought was an approval wakeup call but horrified to see her mother in a shell-shocked condition. Princess’s mother had the problem from midnight 1am but she managed herself not to wake up her lovely princess which she thought would make her feel depressed. But when the situation got out of hands, she woke up the princess and by the time it had become worse. She was struggling to breathe and this made the princess’ mind plunge with vague thoughts.

She slowly came to her senses and started to vociferate with her mother for hiding this decease from everyone. She tried to ring her father still trembling in fear. Princess’ mother stopped her from calling her father as he was returning from Chennai. She told the princess that a person in journey should not be alleged with an intricate notification which would cause stress.

She humbly told that sleep might cure her condition. Now, she understood that she had never noticed what other people went through. Her aunt rang on the day to greet our princess and she was too anxious to attend the call. She picked up the receiver but even before starting to speak, droplets of tears rolled on her cheek. Her throat became dry and she was in need of a cuddle but none was around her. She ended the call abruptly but her face showed the disappointment. When her aunt rang again, she told that “there was a problem in the line”.

She sat in a corner folding her legs and series of questions ran through her mind. She blamed herself for being so ignorant and arrogant towards her parents. She was pondering why she was so adamant about all the luxuries in life while her mother bore all the sufferings without a word of complaint.

Later in the morning, princess’ mother consulted a doctor and doctor prescribed some medicines and advised her to rest for few months. Even in an unhopeful situation a caring mother was only able to just think of her family’s happiness. Princess was able to learn the role of an Indian woman as a mother from that incident. Princess restored her assertiveness and understood life’s sophistication.

“PERSON IN LONELINESS WITH NO ONE TO SHARE THEIR FEELINGS IS THE PERSON IN HELL”

Let this anecdote bring a paradigm shift to your life. Never abuse women for any sake. They are god’s gift to this world and their world is small. They are always selfish and that selfishness is to put smiles on their family members face although they walk through a hell. Gender never invites respect but only character is substantial for respect. So, respect the feisty women around you.

MY QUEST

A SEARCH TO FIND THE PURPOSE OF MY EXISTENCE

The race began eighteen years ago....when I was born. I was in search of something and it took time for me to understand that I came to this universe with a purpose. I didn't know what it was but I was very sure that I was running behind it. Yes! you, me, and all are running behind it. But what is it? Do you think it's Fame? Absolutely not.... Then is it Money? Or any stuff like that? Probably for some it may be. Then what is it? You'll surely know about it at the end of this article.

Let's consider me. When I was in my school I was running through pages in books to score good marks in exams and when I completed my twelfth standard I was running behind my marks to get admission in a reputed institution. After joining in one of those reputed institutions, the confusion started again. Should I have to run again behind marks to get placed in grade ONE MNC companies? This question made me to run behind some new things. If you think that this question made me to go behind girls and enjoy the college life, probably you get a zero for this thought. This is not the only way to enjoy your college life but there are many other ways which you would have never thought before.

A person with a backpack is seen from behind, looking out over a vast, golden field under a bright sky. The text "You are not an ACCIDENT" is overlaid on the image.

You are not an
ACCIDENT

As far as we can discern, the sole purpose of human existence is to kindle a light of meaning in the darkness of mere being.

(Carl Jung)

So this question made me to search an answer for WHY I AM HERE? In this, HERE doesn't mean the college where I study, but my LIFE. The most precious gift that God has given to all of us. Has he given it to you just to live happily using all the resources and fighting for useless money and many other unnecessary stuff like that? No! There should be some reason for us to be here and I mean it. Only if you identify the purpose for your existence and fulfil it, you'll leave this earth as a successful and contented person. Otherwise, even though you have earned a lot of wealth and fame you'll stay as a rubbish and useless waste that will be thrown out of this earth at the right time. I have started my quest in finding the purpose for my existence. Hope you will give a shot to learn about your existence.

The time you find out the purpose of your existence on this universe, you will undergo a total paradigm shift in your thoughts, words and deeds. You'll start appreciating life and its blessings. you'll never be greedy, you'll never disrespect anyone, you'll never waste your time on materialistic ideas and actions.

IMPACT OF CRICKET

Today in India, cricket has more number of fans than any other game. Similar to Indian premier league, there are various games in this world and we all have our own favourite sport. I also have a favourite sport which is cricket. I was introduced to cricket in a very small age just like most of the children in India. It is a game which has no scarcity for sudden twists and turns. It is told that this game was founded by an English King and it was introduced in all the nations ruled by the English and thus it reached India too. Although there are many premier leagues for all other sports in India, none of them are as successful as IPL for cricket in India. It is due to the huge fan base that cricket has in India. But over a few years, some serious questions have been raised. Some started saying that it is because of cricket that other sports have not developed in India. Apart from that some controversies like match fixing, spot fixing also came to the forefront but still, it didn't seem to reduce the craze for cricket in India.

Before the craze for cricket started, it was hockey which was more popular and it was the time when the Indian hockey team was snatching gold in most of the tournaments. But, today the situation of Indian hockey is so pathetic. Today Cricket, Chess and badminton are the three games where Indian players rank high but unfortunately for India, Cricket and chess are not included in any of the major tournaments like Olympics, commonwealth games etc.,

IMPACT OF CRICKET

Though I am a fan of cricket, I have to admit that the amount of money spent on cricket is much more than the money spent on other games. My school cricket coach used to say that cricket is a costly game. Even most of the colleges spend more money for cricket than any other sports. It is such a kind of sport where we have to spend a lot. We consider some cricketers as our heroes. People like Dhoni, Kohli and Sachin are role models for many youngsters in India.

There is nothing wrong in cheering them and getting inspired by seeing them but the problem is that most of us, even pray that India shouldn't lose to other nations in sports like cricket but we never worry about other sports persons. We also have a serious question to ask ourself whether we give the same importance to the soldiers who are serving us by guarding the country and to the farmers who provide food for our survival.

Just as someone once rightly observed about cricket that "Eleven fools are playing and eleven thousand fools are watching", cricket makes people lose their interest on anything else and keep them as slaves.

At times it seem we take games seriously and life as a sport.

அதுபோல தாப்மொழி சிந்தனை வளர்ச்சிக்கு நல்லது.
- நம்பிக்கை என்பது முதலில் தன்னம்பிக்கையாகத் தொடங்கி இறை நம்பிக்கையாக வளர வேண்டும்.சமயம் என்றால் நம்பிக்கை என்பதுதான் பொருள்.
- தமக்குத் தெரியாது என்ற உணர்வுடன் மேலும் மேலும் தெரிந்து கொள்ள வேண்டும் என்று துடிப்பவர்களால் தான் இருட்டில் இருந்து வெளிச்சத்திற்கு வரமுடியும்.
- நமது பண்பாட்டையும், பழங்கலைச் செல்வங்களையும், தேசிய ஒருமைப்பாட்டையும் காப்பதற்கு, நாம் பிறர் உணர்ச்சிகளைப் புரிந்து கொள்ளும் வகையில், அண்டை அயல் மொழிகளைக் கற்றுக்கொள்வது ஒரு சிறந்த வழியாகும்.
- கல்வி அறிவு உள்ள மக்களால்தான் ஒரு தேசத்தின் கலாச்சாரத்தைப் புரிந்து கொள்ள முடியும்.அந்த தேசத்தின் சரித்திரத்தின் மீது அன்பும் மரியாதையும் செலுத்த முடியும்.
- சுதந்திரம் என்பது அவிழ்த்துவிடுவது அல்ல.தாங்களே விரும்பிக் கட்டுப்பாடுகளை மேற்கொள்வது தான் சுதந்திரம்.
- விரல்களுக்குள் திறமைகளை விதைத்து விட்டால் அனுதினமும் அறுவடை செய்யலாம்.
- வயலிலும்,ஆலைகளிலும் உழைக்கின்ற உழைப்பாளியை விட அலுவலகத்தில் வேலை செய்யும் அலுவலர்கள் உயர்ந்தவர்கள் என்கிற மனோபாவம் நாட்டில் வளர்ந்து விட்டது. இந்த நிலை மாற வேண்டும்.
- பள்ளி மாணவர்களின் அறிவு வளர்ச்சியிலும், மனவளர்ச்சியிலும் சமூகத்திற்குரிய மனிதர்களாக அவர்களை மாற்றுவதிலும் தலைமை ஆசிரியர்களுடைய பங்கு மிகப்பெரியது.
- படிப்பு என்பது ஒரு நேரம் தான் இருக்க வேண்டும். மறுநேரம் ஏதாவது ஒரு தொழிலைக் கற்றுக்கொள்ளும் வாய்ப்பு மாணவர்களுக்கு இருக்க வேண்டும்.அதுதான் அம்மாணவர்களுக்குத் தன்னம்பிக்கையைத் தரும்.
