## PEN AND PAPER

My love and passion towards literature never ends. During my first year of college, I used to read articles and poems that were present in the Crusade. From, there I aspired to write an article, but I haven't tried for one. Then I started to write little quotes, but still suffered a lot to make it in a good flow with fine Portrait. One of my senior friends, a writer also an inspiration for me to write quotes and limericks, assisted and guided me in all ways. Then, little by little I screwed myself to bring good conception. Initially, I focused more on motivational and inspiring quotes with a good response and appreciation from my friends circle. Some revealed, that they get motivated and progressed in their efforts rather quitting, because of my optimistic words got embossed in them. That was a pleasing and overwhelmed part and that appreciation insisted me to hold my pen and paper even more.

Every time when I write, I am pretty sure that my conception should be more unique. As I determined, I wrote many quotes with very good genres and posted in Social Medias. Suddenly felt like, I was focusing on certain topics alone, and then I decided to scribble on various themes. Then I started to write microtale and short stories in good genre with topics like love on soul mate, desire to meet future eternal, self-love, self-motivation etc... Also I never forget to highlight the social inputs in my conception. Also I made writing in a habitual flow in regular aspects. Many people approached me to write one for them from my conception.

Then I have sent one of my microtales to the instagram page for competition, and they posted my quote in their page by reframing the portrait. That was my first recognition to my passion. Then I was so much keen on searching the call for stories and quotes and I

made a progress in a regular manner as well. Recently, I participated in another competition conducted by Famian team (instagram page) in the theme on "Soulmate Love". This call for microtales and quotes are little different, like selected participant's quotes and microtales are published in their new book.

## PEN AND PAPER

To the surprise, I was notified with selection of my microtale, and qualified to ink my microtale in the book, that was a day that I was overwhelmed in a joy like anything. Really, this made me to get connected with scribbler's world more and more. Best recognition for one is, when the efforts towards our passion and goals get appreciated. That happened in my life too.

"You are my Sonnet" he said.

"But you are like Glossary that gives soul to limerick, means I'm nothing without you" she corrected.

The above quoted microtale was selected and now published in the book "Glowing Shades". This book is a collection of quotes and microtale written by 52 co-authors, and I'm one among them.

The book was released on February 14, 2020, really that was a pride and happy moment when my conception is published in a book that was read by worldwide. Now, the book declared as the record holder in "India Book of Records" for fastest completion of book. Huge appreciation and wishes, I have received regarding this achievement. Again this made me to fall in love with my pen and paper even more. Still I desired to make a masterpiece in my poetry world and I'm working on it as well. So, be passionate towards your goals and dreams, hustle more to achieve it. During your hustle process, you may face tons of obstacles, negativity, rejection, deportrait in your efforts more and more. Sometimes, that may threaten you and stop you in achieving, but never get comfort of it. At any point of your crunch, tell your hurdles "try me" but don't give up.

*"Hope in her heart!*

*Little curve in her face as a grin!*

*Hustle in her action!*

*Let the destiny gift her Grand slam as a compliment! "*

*One day all your efforts will payback as fruitful victories. Stay Focus!*

**All the best.**

# “I HAVE NO SPECIAL TALENTS. I AM ONLY PASSIONATELY CURIOUS” – ALBERT EINSTEIN

With this famous quote, starting off my (short and crisp) story. I am Yogi AKA Yogeshwaran Jothiraj. I was a student of the esteemed Dr. MCET, studied bachelor's in mechanical engineering (2011 to 2015 batch).

Quickly, to bring my face in front of you, I was one of the lead Singers in our college music band 'The Elixir' and was holding the Secretary position in Fine Arts Club (2014 to 2015).

I have no special talents.  
I am only passionately curious.  
-Albert Einstein

Now, after ages, I'm here to advise something important to all the readers regardless of the age criteria. I was too late to find my passion or dream, in the year 2014. I was so concerned regarding the waste management

system in India. So, I started researching about it a bit and I found we (India) were/are not up to the level of waste management practices around the globe. So, I thought I should change this scenario for the betterment of the future. For this, I needed to learn more about the world's best waste management practices.

Without wasting much time, I flew to Australia to study Environmental Engineering and Pollution Control at Griffith University. The course was much diverse and introduced me to different types of wastes and methods of safe disposal. With all the hard work and networking, my Professor roped me to work on an Australian Government project

– Converting organic waste to fuel (biogas) for transport. We published an international journal based on our work and the project poster presentation was held at a technical conference in China.

In this timeframe, I worked as a Pizza Deliveryman for my living expenses. Worked for a year and I've been promoted to the Shift Manager role. I knew that this was not my permanent career. So, I worked, studied, networked and applied for jobs at the same time. Took me 1 year after my PG to find a job – in one of my dream firms. Now, I am enjoying my career and acquiring knowledge at the same time.

**“I HAVE NO SPECIAL TALENTS. I AM ONLY PASSIONATELY CURIOUS”  
– ALBERT EINSTEIN**

One day, I'll be returning, and I hope, I'll be holding an important role in the Ministry of Environment, Forest and Climate Change (India) and advising everyone about the significance of Sustainability.

So, what do you reckon? Did I choose the right path? I'll leave that with you.  
What is your idea now?

I would say, find your passion and start exploring yourself. It is now up to you!!

**Jai Hind.**

## A LEARNING JOURNEY..

NSS MCET had been working on the School cluster project (SCP) with the help of CIBIE. SCP is a teaching program where our college students will teach the Government school students, in the villages, that had been adapted by our college. I am glad that as a part of NSS, I was able to attend this workshop at Agastya.

August 03, 2019 the day when all our presumptions started to come true. Located amongst the hills of Guddivanka, Kuppam in a considerably remote place in Yanadipalli, Andhra Pradesh, bordering the states of Tamil Nadu and Karnataka. This place offers a vivid experience to those who visit it.

Starting with serene locations, Bio-mimicked buildings to some of the most effective ways of learning it gives a profound feeling that is totally inexpressive through words. Spanning over a colossal area of 172 acres, it homes nearly 50 species of butterflies and various species of snakes. All the building are built in such a way that they merge with the environment. Rooted with a baffling variety of tress and a well-planned eco system this place is the real man made marvel.

We went to AGASTYA for a four day training program that aims to make students and teachers to learn & teach in way that is more efficient than traditional ways. For our surprise Agastya taught us more than what we expected. Hundreds of children from nearby schools and rural areas get to visit this wonderful place every single day and a chance to get away with something useful. Not only students but also scientists of various fields come to Agastya for their research. Beginning with biological science to rocket science this place is a hub for Knowledge transfer.

The first day we had a campus tour visiting various architectural buildings, One of the many things that gave us a jaw dropping experience are the beetle shaped building and the planetarium. Then we went to the workshop where we created our science models. Not only did we learn things we were taught how to understand the

## A LEARNING JOURNEY..

problem in various perspectives. Doesn't matter how things are, if one is not respected no one likes to stay at such places nevertheless the people there welcomed us with all the hearts and we were overwhelmed by the hospitality and benevolence. Despite being in a remote place we were served with quality food and amenities

Though our time in Agastya was short it gave us numerous memories and knowledge to be remembered and I wish that this programme continues to imprint knowledge and creativity in the time to come. We want to express our gratitude from the bottom of our hearts to CIBIE- MCET for such an amazingly fascinating time.

## TURN INSIDE OUT

“The journey not the arrival matters”. These words are simple but made me think about the life. Life is not a cycle it is straight road of infinity distance. People of this generation made their life as much as simple they can like bringing the whole life into their palm. This made the people blockhead. In turn this made the people not even to think about what they do both in past and present. We learn just to survive, but survival does not fulfill itself only with learning. It says to EXPLORE. It does not mean just to roam, it truly means Knowledge. The meaning comes possible only if you explore. See different things, that will make you to learn different things and those things develop the knowledge and only if you develop knowledge you could survive. That is the Survival means.

These things I understood only when I got my SSLC results. From my childhood to Tenth grade I never do anything on my own. I just do whatever my elders say. I don't even think whether it is right or wrong, I just do it like a programmed device. I did not realize that I am not doing things on my own, to say I was dependent, still I am. After seeing my Tenth results I was shocked that my mother was not satisfied with that even after getting 80% in my ICSE board. She blasted me, at that time she was like a devil to me. Those things made me to think like a scientist. The scientist in my body gave me the answer “THINK”. Then I started realizing things and started to ask questions for every action I do. That thinking made me to explore things only that boosted up my knowledge. The word EXPLORE made me to feel like a MAN. That won't bother if you get low marks, that won't depress you in your thoughts, it develops your communication relationship in the society, and it just satisfies you. Survival requires satisfaction for a peaceful life. I lead a peaceful life by exploring.

Students of this generation think that everything can be learnt with technologies but they are forgetting that those technologies were developed by them. It is not that technology can fulfil all our needs, the most used Technology is Google in our daily life. People don't know even Google can't answer few questions. You can speak technically with technologies but you can't talk with them emotionally. There it again ends with no satisfaction. It's not that we can blame only the technologies, we are pushed to this form of society. It seems the society has undergone a big renovation. That renovation came with a rule saying people should be speaking only with the machines. This in turn made all the cultures extinct. And also changed the purpose of the products in the renovation

## TURN INSIDE OUT

process. This made the survival hard. This in turn has created many issues to the society like unemployment, poverty etc...

This should be changed and it is possible only if people starts to explore. They should not be satisfied. The “SATISFACTION” should be deleted in minds of people. Only then people start to search for things. That will make a new renovation in the society. People say, your mind is to think and heart is to love but only if they both talk each other and gives you the command you will be fulfilled in what you do. Start exploring that will make you to think a lot. It’s like you can’t judge the book with its title, if you do then you are wrong just turn it inside out you will learn a lot.
