## **Department of Information Technology**

### **Vision**

**To become a Centre of Excellence in education and research in the field of Information Technology, to meet global challenges in computing industries.**

### **Mission**

**To impart world-class knowledge in the field of Information Technology.**

**To support and facilitate research and development activities.**

**To promote industry-institute interactions to empower the faculty members and students.**

**To develop all round personality by inculcating the values and skills needed for students to upgrade themselves as IT professionals.**

### **Programme Educational Objectives (PEOs)**

**The graduates will:**

**PEO1. Technical Expertise: Have high level of technical competency to identify problems and to generate innovative solutions, which would conform to the needs of IT industry.**

**PEO2. Lifelong Learning: Successfully adapt to changes in roles and responsibilities, through lifelong learning, for collaborating professionally with various stakeholders.**

**PEO3. Ethical Knowledge: Ethically apply their computing knowledge and skills considering societal, economic and environmental factors.**

## **Programme Outcomes (POs)**

*The graduates of Information Technology Programme will be able to:*

**PO 1. Engineering knowledge:** *Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization in the field of Information Technology.*

**PO 2. Problem analysis:** *Identify, formulate, analyze and solve complex problems in computing industries using principles of mathematics, natural sciences and engineering sciences.*

**PO 3. Design/development of solutions:** *Design a software solution for complex engineering problems and design system processes to meet specific needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.*

**PO 4. Conduct investigations of complex problems:** *Conduct investigations of complex problems including design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusion.*

**PO 5. Modern tool usage:** *Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.*

**PO 6. The engineer and society:** *Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.*

**PO 7. Environment and sustainability:** *Understanding the impact of engineering solutions in social environment and exhibit the knowledge for sustainable expansion.*

**PO 8. Ethics:** *Realize and bind to professional ethics and the norms of engineering practices.*

## *Programme Outcomes (POs)*

*The graduates of Information Technology Programme will be able to:*

**PO 9. Individual and team work:** *Function effectively as an individual, and as a member or leader in diverse teams and in multidisciplinary settings.*

**PO 10. Communication:** *Communicate with engineers and society to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions related to IT Professionals.*

**PO 11. Project management and finance:** *Demonstrate and apply the knowledge of engineering and management principles to one's own work, as a team leader or a member to manage project in multidisciplinary environments.*

**PO 12. Life-long learning:** *Recognize the need for, and have the ability to engage in independent and life-long learning in the context of technological change.*

## *Programme Specific Outcomes*

**PSO 1. Open Source Software:** *Able to develop customized solutions for real world problems using open source software.*

**PSO 2. Data Science:** *Able to manage, store, retrieve and analyze the voluminous data efficiently.*

**Google described ChatGPT as 'code red', this technology can lead to a big change in the search engine**

**ChatGPT**

# CODE RED

'Code Red' in google over ChatGPT'ChatGPT, which has reached over 1 million users in just five days after its public launch. It can generate singular answers to queries in a conversational, humanlike way by collecting information from millions of websites. ChatGPT is a AI based software.Users have asked the ChatGPT to write college essay, provide coding advice and even serve as therapist etc...

It's more advanced than Google search engine. There is also some sort outs need to be done on ChatGPT like opacity and biosdatas .If the drawbacks are sorted soon. This may lead to pull down the Google search enginein very few years and ChatGPT will be the most used search engine in the future.

# IBM Watson

*IBM Watson is a data analytics processor that uses natural language processing, a technology that analyzes human speech for meaning and syntax. IBM Watson performs analytics on vast repositories of data that it processes to answer human-posed questions, often in a fraction of a second. IBM Watson's cognitive and analytical capabilities enable it to respond to human speech, process vast stores of data, and return answers to questions that companies could never solve before. As new data is entered into Watson's data repository, it uses machine learning that is the product of the processing it performs during analytics to continue to increase its knowledge of subject areas, and the insight it is capable of delivering to users.*

# IBM Watson

*IBM Watson is employed in nearly every industry vertical, as well as in specialized application areas such as cybersecurity. This technology is often used by a company's data analytics team, but Watson has become so user friendly that it is also easily used by end users such as physicians or marketers. Companies in a host of industries are already running IBM Watson for predictive analytics and problem solving. IBM Watson gives them a competitive advantage and helps them return more value to their customers and constituents.*

# Data analytics

*Data analytics (DA) is the process of examining data sets in order to find trends and draw conclusions about the information they contain. Increasingly, data analytics is done with the aid of specialized systems and software. Data analytics technologies and techniques are widely used in commercial industries to enable organizations to make more-informed business decisions. Scientists and researchers also use analytics tools to verify or disprove scientific models, theories and hypotheses.*

*As a term, data analytics predominantly refers to an assortment of applications, from basic business intelligence (BI), reporting and online analytical processing (OLAP) to various forms of advanced analytics. In that sense, it's similar in nature to business analytics, another umbrella term for approaches to analyzing data.*

# *Data analytics*

*Data analytics initiatives can help businesses increase revenue, improve operational efficiency, optimize marketing campaigns and bolster customer service efforts. Analytics also enable organizations to respond quickly to emerging market trends and gain a competitive edge over business rivals. The ultimate goal of data analytics, however, is boosting business performance. Depending on the particular application, the data that's analyzed can consist of either historical records or new information that has been processed for real-time analytics. In addition, it can come from a mix of internal systems and external data sources.*
