## Policy document for Green Campus Initiatives

### 1. INTRODUCTION

A "green campus" is a location where environmentally friendly actions and instruction work together to promote sustainable growth. By combining traditional and tried-and-true methods with the green campus concept, a college can lead the way in "forward delivery" by minimizing the use of energy and water consumption on campus and handling waste, transportation, air pollution, etc. in an efficient manner. In order to support the green campus plan, MCET developed a policy, and it requires all of its partners to follow it.

### 2. POLICY OBJECTIVE

In order to provide a safe and healthy workplace, it is important to raise consciousness about "reducing" the exploitation of natural resources, maintaining environmental development in all actions undertaken by its stakeholders.

### 3. SCOPE OF THE POLICY

The institution works to promote a green and clean campus to lessen the direct effect on the environment system. One way it does this is by

1. Constantly planting more trees inside the campus to cover unused areas and promote clean air inside the campus.
2. Setting up and keeping a waste water management system on campus, which will aid in the removal of suspended materials and allow the reuse of treated water for campus landscaping? Waste water cannot be dumped anywhere; instead, it must be put to good use.
3. Installing Solar Power Plant/Bio gas plant to enable renewable energy generation and minimize the dependency on fossil fuels. The college keeps installing solar energy panels/ solar water heaters /solar street lights on regular basis as part of continuous development.
4. Installing rainwater harvesting terminals to replenish groundwater where it may be feasible. Establishing facilities for bore wells or open wells to receive collected water.

5. Promoting the use of ICT tools to reduce the use of paper on campus.

6. Banning the use of plastic/polyethylene in any form inside the campus and encourage earth friendly materials like Paper bags, silver cups etc.
7. Increasing the use of more energy-efficient equipment to reduce power utilization, such as LED bulbs.
8. Carrying out routine evaluations of sustainable practices, nonrenewable energy sources, and the management of excessive energy use and energy stage.
9. Providing greenish lawns and pedestrian friendly pathways to urge commuters to reach various buildings.

#### 4. RESPONSIBLE PARTIES

This green policy is applicable to all MCET stakeholders as well as the numerous tasks that the institution performs. It will be done to keep track of the policy's application and effects. Various cells /clubs like NSS, Environmental Club will be jointly working along with gardening team towards fulfilling the goals of green campus policy.

#### 5. TIME PERIOD

The policy will be implemented on perpetual basis and will be reviewed and updated once in three years.

Ref.No: MCET/ RESE 2015/2015-2016

Date: 03.09.2015

**CIRCULAR**

**Sub:** Ban on the use of plastics inside the campus -Reg

Plastic pollution has emerged as a serious menace and plastic trash can harm the quality of soil and subsurface water. Reduced usage of unnecessary plastics is required to fight plastic pollution.

Hence, as a part of renewable energy and sustainable environment initiative, the use of plastic water bottles and non-biodegradable plastics are absolutely prohibited inside campus. Henceforth, all the faculty members, staff and students are requested to use steel water bottle and jute bags hereafter.
